| Monday | 01/30/12 | 1:00 p.m. | Medical Student Orientation |
| Tuesday | 01/31/12 | 12:00 noon | Grand Rounds
“Functional MRI Detection of Deception”
F. Andrew Kozel, M.D., M.S.C.R.
Associate Professor
Director of Mood Disorder Clinic
USF Department of Psychiatry and Neurosciences |
| Thursday | 02/02/12 | 8:00 a.m. | Call Center Meeting

<u>Resident Lectures:</u>
8:00 a.m. PGY-3 – “Long Term Dynamic Therapy”
Dr. Robert Fernandez
CHILD – “Psychodynamic Psychotherapy”
Dr. Harris Feinstein

9:00 a.m. PGY-3 – “Clinical Case Conference”
Dr. Kailie Shaw/Beth Reese, LCSW
PGY-4 – “Brief Dynamic Therapy” Dr. Robert Fernandez
CHILD – “Infants and Preschoolers” (self study)

10:00 a.m. PGY-3 – “Advanced Psychopharm”
Thea Moore, PharmD

10:30 a.m. CHILD - “Neurobiology - Pharmacogenetics” Dr. Huziak
(Morsani Room 2010)

1:00 p.m. PGY-1 – “Doctor-Patient Relationship” Dr. John Zak
PGY-2 – “CBT – GAD” Dr. Sulkowski
GERI – Geriatric Education Committee Meeting

2:00 p.m. PGY-1 – “Introduction to Psychopharm” Dr. Daniel Fallon
PGY-2 – “Developmental Theories” Dr. Michael Bengtson

3:00 p.m. PGY-2 – “Addiction” |

Friday 02/03/12

No Third Year Medical Student Lectures

In The Know!

Happy Birthday Wishes to Dr. Patrick Marsh/February 5th.

Dr. Karen Goldberg will be a speaker/panelist for the upcoming MOSI REEL-to Real event on Tuesday, February 21, 2012 at 6:00 p.m. In the movie “Children of a Lesser God”, a teacher (played by William Hurt) develops a relationship with a student (played by Marlee Matlin) at a school for the deaf. The film (1986, rated R) raises issues about deaf and hearing cultures, sign language and deafness. These issues will be tackled in a discussion by a panel of experts, including Dr. Goldberg, in deafness and hearing after the movie.

Minority Medical Student Elective in HIV Psychiatry

Minority medical students will receive a stipend for a 4th year elective in HIV psychiatry. This rotation will provide an intense training in HIV mental Health including neuropsychiatry, a clinical and/or research experience, and participation in the Committee on AIDS of the American psychiatric Association. This program is intended to identify minority medical students and those who have primary interests in services related to HIV/AIDS and substance abuse and its relationship to the mental health or the psychological well being of ethnic minorities. For more information and applications, please contact Pat Crump at pcrump@health.usf.edu.

Research Happenings!

Current Open Studies – Call [813-974-2832](tel:813-974-2832) or [813-974-1404](tel:813-974-1404) for more information on any study or to refer a patient.

Schizophrenia PRIDE Study – Jail Recidivism

A 15- month open label study comparing oral antipsychotic treatment to paliperidonepalmitate injections in delaying arrest recidivism in adults with Schizophrenia. Subjects must have been incarcerated at least twice in the last 24 months with the last release from jail occurring within 90 days prior to screening. Subjects receive antipsychotic medications at no charge. Principal Investigator – Jean Fils, M.D.

Now Open and Enrolling – ADHD Aggression Study

Kids between ages of 6-12 years old and in generally good health with a diagnosis of ADHD are eligible to participate in a 10-week investigational medication trial. They must be receiving stimulant medication treatment for ADHD symptoms for 1 month prior to study enrollment and be experiencing aggressive behaviors. This study is a 10 week investigational medication trial that will test the effectiveness and safety of molindone hydrochloride extended release as an add-on treatment for aggressive behaviors in children with ADHD. Principal Investigator – Mike Bengtson, MD.

Bipolar I in Teens

This study is a 3- week investigational medication trial that will test the effectiveness and safety of asenapine compared to placebo in teens ages 12-17 with Bipolar I disorder who are currently experiencing a manic or mixed episode. A 26-week extension study is available. Study medication, study visits, and required laboratory work provided at no cost. Volunteers must be between the ages of 12-17 years old and in generally good health with a diagnosis of Bipolar I disorder and currently experiencing manic or mixed symptoms. Principal Investigator – Mike Bengtson, MD.

Study-related care will include a comprehensive diagnostic exam, physical exam, laboratory testing, ECG and frequent doctor visits, as well as investigational medication, all at no charge. This is a placebo controlled trial and all participants who complete the study will have the option to enroll in an open label 6 month extension study. Enrolled patients will be compensated for time and travel.

Quality of Life in Youth with Tic Disorders

A one-time study visit evaluating the quality of life in youth with tic disorders, specifically on various aspects of family functioning and the daily challenges faced by children and their families. Children ages 6-17 years old with a diagnosis of a tic disorder (i.e. Chronic tic disorder or Tourette Syndrome) and are experiencing current tics are eligible to participate. This study is a one-time visit that will include questionnaires and assessments. Participants will also have the opportunity to attend a focus group with youth of similar age assessing kinds of help they received and accessibility of services and the difficulties faced by having tics. Please call (727) 767-8230 for more information. Principal Investigator: Tanya Murphy, MD

Child and Adolescent Tourette's Disorder Guanfacine Clinical Trial

The purpose of this research study is to learn more about the new extended release formula of the drug, guanfacine. This new formula is called *Intuniv*. This study will help us understand how safe and how well this new extended release formula of guanfacine works for children with chronic tics. Your child is being asked to take part in this research study because he/she has been diagnosed with Chronic Motor or Vocal Tic Disorder or Tourette's Disorder. Main symptoms are motor tics such as uncontrolled movements and/or vocal tics such as repeated noises. These tics occur many times a day, nearly every day lasting for at least 1 year. Children ages 6-17 years old are eligible to participate. Please call (727) 767-8230 for more information. Principal Investigator: Tanya Murphy, MD

Living with Tics

The Living with Tics research study hopes to show how well a type of psychotherapy helps children better cope with tics and become more resilient. Children who are interested to participate must attend an initial assessment to determine eligibility. Eligible participants must be between 8 and 18 years of age, have a diagnosis of Tourette Syndrome or Chronic Tic Disorder, experience tic-related impairment, and either be medication-free or on stable medication. If eligible, interested participants will be randomly assigned to receive immediate psychotherapy or a 10 week waitlist control condition followed by subsequent psychotherapy. As part of the study, there is no charge for the psychotherapy treatment. The immediate psychotherapy condition consists of weekly therapy sessions over a 10 week period. This multi-component treatment approach includes habit reversal training, anger management, problem solving skills and other related therapeutic components to help improve the quality of life for children with chronic tic disorders. Please call (727) 767-8230 for more information. Principal Investigator: Eric Storch PhD.

Adult OCD Ondansetron Clinical Trial

The purpose of this research study is to investigate the effectiveness, safety, and tolerability of 2 dosages Ondansetron as compared to placebo (a substance which looks like an active drug but has no active ingredient) in adult who have OCD and who are currently taking a selective serotonin reuptake inhibitor (SRI) such as Anafranil® (clomipramine) Paxil® (paroxetine), Prozac® (fluoxetine), Luvox® (fluvoxamine, or Zoloft® (sertraline). Another purpose of this study is to find out how the study drug works in the body when taken along with an SSRI.

Please call (727) 767-8230 for more information.

Principal Investigator: Tanya Murphy, MD

Pediatric OCD D-Cycloserine and Cognitive Behavioral Therapy (CBT) Research Study

The purpose of this research study is to examine if d-cycloserine enhances cognitive behavioral therapy for pediatric OCD. Participants will be involved in fifteen clinical visits spanning a nine-month period. Each participant will receive ten sessions of cognitive behavioral therapy and seven doses of the study medication or placebo one hour prior to session. Children ages 7-17 years old are eligible to participate.

Please call (727) 767-8230 for more information.

Principal Investigator: Eric Storch PhD

Cognitive-Behavioral Therapy (CBT) for Anxiety Disorders in Children with Autism Spectrum Disorder Research Study

The purpose of this research study is to examine the efficacy of a manualized cognitive-behavioral therapy to treat anxiety disorders in children with autism spectrum disorders. Therapy sessions last approximately one hour a week for sixteen weeks. In addition, participants will be involved in a number of anxiety and developmental assessments free of charge. Children ages 7-16 years old are eligible to participate. Please call (727) 767-8230 for more information. Principal Investigator: Eric Storch PhD
