

# DEPARTMENT OF PSYCHIATRY

WEEK OF JUNE 22-26, 2015

June 22-26, 2015

## WWW.HSC.USF.EDU/PSYCH NEWSLETTER

### MEETINGS

#### Thursday, June 25 RESIDENT LECTURES

PGY 1—4 & Child & Adolescent Psychiatry  
Residents: Please see weekly didactic notice emails from the Education Office for scheduled topics and presenters.

#### THIRD YEAR MEDICAL STUDENTS

#### Friday, June 26

8-9 AM Acute Visual Disturbances & Neuroophthalmology  
– Drs. Gandhi & Frontera  
9-11 AM Neuromuscular Diseases & Emergencies  
– Drs. Katzin & Vu

### 2015 PSYCHIATRY GRADUATION

#### In this Issue:

Meetings	I
In the Know	I-2
Research Happenings	3-5

**IN THE KNOW**

**2015 PSYCHIATRY GRADUATION**

**Congratulations to our faculty and staff, who received awards at the graduation ceremony!**

**2015 Teacher of the Year - Kimberly Hartney, MD**

**2015 Outstanding Teaching and Clinical Award - Carlos Santana, MD**

**2015 Kay Isaac Support Staff Award - Deborah Ward**

**2015 Robert C. Fernandez Resident Teacher of the Year Award - Jonathan Stewart, MD**

**2015 Outstanding Clinical Teaching Award - Elizabeth Reese**

**2015 Child and Adolescent Psychiatry Fellowship Educator of the Year Award - Mark Cavitt, MD and Jeffrey Alvaro, MD**

**2015 Addiction Psychiatry Fellowship Educator of the Year Award - Elie Francis, MD**

June 22-26, 2015

### RESEARCH HAPPENINGS!

#### Now Enrolling – Mild Alzheimer's disease

This is a double-blind, placebo-controlled study to test the safety and effectiveness of an anti-amyloid antibody administered subcutaneously as a disease-modifying treatment in patients age 50 - 90 with mild AD. Stable dose of approved medications for AD will be permitted at study entry. Patients will undergo brain MRI exams for monitoring safety and response to study treatment. They will also undergo safety and cognitive testing. Patients must have a person with whom they are regular contact, who can accompany them to study visits. Please call Kathy at (813)974-7006 to make a referral.

*Principal Investigator: Jean Fils, MD*

#### T-FORCE study: Investigational Medication for Children and Adolescents with Tourette's Disorder

The primary purpose of this research study is to determine the safety and tolerability of an investigational medication (NBI-98854) for Tourette syndrome. Each child will be evaluated to determine his or her eligibility to participate in the research study. Each participant who qualifies will receive the investigational medication, study-related medical exams, and laboratory tests at no cost. As some of the medical appointments can be lengthy, many forms of entertainment will be available to participants at his or her study visits. Compensation for time and travel is also available. Please call (727) 767-8230 for more information.

*Principal Investigator: Tanya Murphy, MD*

#### Investigational Medication (Ecopipam) for Children and Adolescents with Tourette's Disorder

The purpose of this research study is to evaluate an experimental drug called ecopipam in children ages 7 to 17 with Tourette's syndrome. The drug has not been approved by the FDA. There will be eight study visits and six telephone call visits, totally about 4 months. For the first two weeks of the Study Drug Part 1, subject will slowly increase the number of tablets (50/50 placebo or ecopipam) and stay on a stable dose for 2 weeks before discontinuing the study drug. After at least 10 days, subject will be re-examined. Study Drug Part 3 will be very much like Study Drug Part 1: for the first two weeks of the Study Drug Part 3, the subject will slowly increase the number of tablets (50/50 placebo or ecopipam, opposite of part 1) and stay on a stable dose for 2 weeks before discontinuing the study drug. Compensation for time and travel is also available. Please call (727) 767-8230 for more information.

*Principal Investigator: Tanya Murphy, MD*

**For current open studies, please call Kathy at (813) 974-7006 or Colleen at (813) 974-9104 for more information on any study or to refer a patient.**

June 22-26, 2015

### RESEARCH HAPPENINGS!

#### **Investigational Medication (SD-809 [Deutetrabenazine]) for Adolescents with Tourette's Disorder**

The purpose of this research study is to evaluate an investigational medication (SD-809 [Deutetrabenazine]) that may help reduce tics. Tetrabenazine is a drug that has been approved in several European Union countries and Canada for the treatment of various movement disorders including tics, and it has also been approved by the US Food and Drug Administration (FDA) for the treatment of involuntary movements associated with Huntington Disease. SD-809 is an investigational drug, meaning it has not been approved by the FDA. SD-809 has the same action as tetrabenazine; however, SD-809 is broken down in the body more slowly than tetrabenazine. These differences in break down and release may mean that SD-809: 1) may be taken fewer times a day and 2) may react differently in the body compared to tetrabenazine. Study participants must be 12-18 years old and diagnosed with Tourette's Disorder. The clinical trial will involve taking the experimental drug for an 8-week period. Study participants will be compensated for their time. Please call (727) 767-8230 for more information.

*Principal Investigator: Tanya Murphy, MD*

#### **Investigational Medication (Bitopertin) for Adults with OCD**

The purpose of this research study is to evaluate an investigational medication (bitopertin) for adults with OCD, and determine if patients treated with bitopertin and a selective serotonin reuptake inhibitor (SSRI) may experience fewer symptoms compared with those treated with SSRI only, a currently recommended treatment for OCD. To prequalify for this study, patients must be between the ages of 18 and 65 years, currently taking medication for OCD, and continue to have symptoms of OCD while on medication. Additional eligibility requirements will be discussed with all potential participants prior to enrollment. Reimbursement for travel may also be provided. Please call (727) 767-8230 for more information.

*Principal Investigator: Tanya Murphy, MD*

#### **Cognitive-Behavioral Therapy (CBT) for Anxiety Disorders in Children with Autism Spectrum Disorder Research Study**

The purpose of this research study is to examine the efficacy of a manualized cognitive behavioral therapy to treat anxiety disorders in children with autism spectrum disorders. Therapy sessions last approximately one hour a week for sixteen weeks. In addition, participants will be involved in a number of anxiety and developmental assessments free of charge. Children ages 6-17 years old are eligible to participate. Please call (727) 767-8230 for more information.

*Principal Investigator: Eric Storch, PhD*

June 22-26, 2015

### RESEARCH HAPPENINGS!

#### **Stepped Care Cognitive Behavioral Therapy for Pediatric Obsessive Compulsive Disorder**

The purpose of this research study is to assess the efficacy of a form of Cognitive Behavioral Therapy (CBT), called Stepped Care CBT, that requires fewer therapy visits and utilizes family members as active components in treatment. Children and families who are interested must complete an initial assessment to determine eligibility.

Eligible participants must be between 8 and 17 years of age and have a primary diagnosis of Obsessive Compulsive Disorder. Once eligibility is determined, participants will be randomly assigned to receive Stepped Care CBT or standard CBT. Those receiving Stepped Care CBT begin treatment in "Step One" which includes 3 sessions with a therapist over the course of 6 weeks while being coached through a take-home workbook. If after 6 weeks it is determined by the research team that insufficient progress has been made, participants progress to "Step Two" which includes 9 additional therapy sessions over 9 weeks. Those receiving standard CBT will receive weekly therapy sessions for 12 weeks. Please contact Brittney Dane at (727) 767-7427 for more information.

*Principal Investigator: Adam B. Lewin, PhD, ABPP*

#### **Parent-led Behavioral Treatment for Young Children with Problematic Anxiety**

The purpose of this research study is to examine the effectiveness of a parent-led behavioral treatment for children ages 3 to 7 years old with problematic anxiety. Children and families who are interested must complete an initial assessment to determine eligibility. Once eligibility is determined, participants will be randomly assigned to receive 5 weeks of the parent-led behavioral treatment or a 5 week wait-list condition (followed by 5 weeks of the therapy intervention). Please call (727) 767-8230 for more information.

*Principal Investigator: Adam B. Lewin, PhD, ABPP*
