A Case Study; But Why
Johnny's can't come out to play.

Vital Statistics:

**TRENDS**

*What If We Were Equal? A Comparison Of The Black-White Mortality Gap In 1960 And 2000*

Closing this gap could eliminate more than 63,000 excess deaths per year among African Americans.

by David Satcher, George E. Floy Jr., Jocelia McCann, Andrew Troutman, Steven H. Woolf, and George Stern

ABSTRACT: For United States have made progress in decreasing the black-white gap in civil rights, housing, education, and income since 1960 but both disparities persist. No

The black-white gap in all-cause mortality has persisted from 1960 to 2000. The black-white gap in heart disease mortality between 1960 and 2000 and actually widened for heart and the black-white gap in age

To read vital statistics section in full, please visit our website. Using 2002 data, an estimated 60,000 excess deaths each year would be prevented in the United States if the black-white mortality gap could be eliminated.

**Note:** The image contains a representation of black and white communities and statistical data related to health disparities. Please refer to the full report for detailed information on the trends and implications of the black-white mortality gap. For access to the full report, visit our website.
Let’s get on the same page.

Health

• “The presence of physical, psychological, social, economic and spiritual well being not merely the absence of disease or infirmity”

• “The maintenance of a harmonious balance of mind, body and spirit”
  — Community and individual

Health Equity

• “Health equity is the realization by ALL people of the highest attainable level of health. Achieving health equity requires valuing all individuals and populations equally, and entails focused and ongoing societal efforts to address avoidable inequalities by assuring the conditions for optimal health for all groups, particularly for those who have experienced historical or contemporary injustices or socioeconomic disadvantage.”
Health equity as a development outcome

The development of society can be judged by:

- the quality of its populations' health
- the fairness in distribution of health, and
- the degree of protection provided from disadvantage due to ill-health

Health Inequities

- Systemic, avoidable, unfair and unjust differences in health status and mortality rates and in the distribution of disease and illness across population groups. They are sustained over time and generations and beyond the control of individuals

Justice

- The quality of fairness
- The principle of moral rightness; equity
- Conformity to moral rightness in action or attitude
Social Justice

- The application of principles of justice to the broadest definition of society

- Implies
  - Equity
  - Equal access to societal power, goods and services

- Universal respect for human and civil rights

Social Justice

- “When we approach health from a social justice perspective, we are necessarily concerned with the political, economic and social arrangements that impinge on the lived experiences of social groups.” (Jones, Hatch, Troutman)

Universal Declaration of Human Rights

December 10, 1948

- Article 1: “All human beings are born free and equal in dignity and rights.”

- Article 24: “Everyone has the right to a standard of living adequate for the health and well being of him self and is family including food, clothing, housing and medical care.”
The Right to Health

- **Preamble to the constitution of the WHO states** “The enjoyment of the highest standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition.

Framing

How you frame an issue

- The questions you ask
- Determines your analysis of the issue
- Determines how you prioritize it
- Determines your policy choices
- Determines resource allocation
- Can determine your allies and your enemies
- Can define when an issue has been resolved
Reframing

- Health vs. Healthcare
- Individual vs. Population Health
- Market Justice vs. Social Justice
- Rights vs. Privileges
- Biological/Behavioral Determinants vs. Social Determinants
- Creating Health Equity vs. Eliminating Health Disparities

Note: 29.0% of Hispanic households and 32.3% of Black households had 0 or negative net worth in 2002.
Reference: Pew Hispanic Center Report, 1664.
Stress

- Continuing existence of anxiety, insecurity, low self esteem and social isolation
- Lack of control over home and work life
- Profound effect on health
- Cumulative

The social gradient

Undoing Racism
What is racism?

A system of structuring opportunity and assigning value based on the social interpretation of how one looks ("race")
What is racism?

A system of structuring opportunity and assigning value based on the social interpretation of how one looks ("race")

– Unfairly disadvantages some individuals and communities
– Unfairly advantages other individuals and communities

Source: Jones CF, Phylon 2003
Levels of Racism

• Individually Mediated
• Institutionalized
• Internalized

Tell me how a man died and I’ll tell you where he lived
Aristotle

Housing
PLACE MATTERS

The Troutman Group
Public Health’s Role: Assuring the conditions in which people can be healthy
The CHE is dedicated to **a civic process that builds social engagement**, autonomy and movement to **strengthen communities and influence public policy in an effort to Create Health Equity**.
Current Work

• Framing research
• Health Equity Community Hearings
• Civic capacity building mini grants (Community Dialogues)
• Health Equity Speaker Series
• Web based learning
  • Retraining workforce (Dialogue process)
    — Outreach workers as community organizers
• Undoing Racism workshops (community wide)
• Health Equity Summit

Current Work (Cont)

• Photo voice
• Community dialogues
• Operationalizing Health Equity within the department
• HH project
• HIA-Shepard Square (Hope 6)
• The cabinet dialogue
• Food justice

Health Impact Assessment
Health Impact Assessment (HIA)

A combination of procedures, methods, and tools by which a policy, program, or project may be judged as to its potential effects on the health of a population, and the distribution of those effects within the population (Gothenburg consensus statement, 1999)

Food Access

Strategy 3: Expand access to and distribution of healthy food
Increased Neighborhood Access

Phyllis Wheatley Students present
Photo-voice Exhibits on
Health Policy Issues
Youth Involvement

Photo Voice
• Youth empowerment through engagement
• Community health and barriers
• Youth as creators, producers, interpreters
• Raise awareness about the policy process
• Presentation to policy makers (Mayor Metro Council, Board of Health, Business Community
If my community were healthy it would look like, no people littering, people riding bikes, no people dealing drugs, kids playing at the park, no gunshots, parents and kids walking their dogs, no people smoking, parents taking their baby's in a stroller to the park to walk them around the park. Denzel: age 10

My neighborhood has many train tracks and a really big factory that does something, I don’t know what. There is a church, a community center but there is no store close to where I live. D'coreyan: age 10

Every day I go to the community center on the side of it, they are selling drugs or showing off their guns and sometimes I am scared to walk past because I think they will shoot me. Michael: age 10
Health Policy is Social Policy

Health in All Policies addresses the effects on health across all policies such as agriculture, education, the environment, fiscal policies, housing, and transport. It seeks to improve health and at the same time contribute to the well-being and the wealth of the nations through structures, mechanisms and actions planned and managed mainly by sectors other than health. Thus HiAP is not confined to the health sector and to the public health community, but is a complementary strategy with a high potential towards improving a population’s health, with health determinants as the bridge between policies and health outcomes.

The London Health Inequalities Strategy

• Initiative of the Mayor of London
• Objectives
  – Empowering individuals and communities
  – Equitable access to high quality health and social services
  – Income inequalities and health
  – Health, work and well-being
  – Healthy places
Social justice is a matter of life and death. It affects the way people live, their consequent chance of illness, and their risk of premature death...

CSDH three overarching recommendations:

1. Improve daily living conditions
2. Tackle the unequal distribution of power, money and resources
3. Measure and understand the problem and assess the impact of action

Building a Social Movement; A Common Vision of Hope “The Power of One”
The Civil Rights Movement Didn’t Go Far Enough

We must complete the process.
Are You Willing to Take the Risk?

To laugh is to risk appearing a fool. To weep is to risk appearing sentimental. To reach out for another is to risk involvement. To expose your feelings is to risk exposing your true self. To place your ideas, your dreams before the crowd is to risk their loss. To love is to risk not being loved in return. To live is to risk dying. To hope is to risk despair. To try is to risk failure.
But risks must be taken because the greatest hazard in life is to risk nothing. The person who risks nothing, does nothing, has nothing, and is nothing. He may avoid suffering and sorrow, but he can't simply learn, feel, change, grow, love or live. Chained by his certitude, he is a slave, he has forfeited his freedom. ONLY A PERSON WHO RISKS IS FREE

Health Inequalities

• “Inequalities in respect of life expectancy or general state of health which are wholly or partly a result of differences in respect of general health determinants”
Creating Health Equity Through Social Justice; Strategies Towards Building Community Health

Cultural Competence Mental Health Summit XVI
Adewale Troutman, M.D., M.P.H., C.P.H.
The Troutman Group

Integration of Behavioral Health Focus
• Inequities in access
• Inequities in misdiagnosis
• Inequities in health status of those in the behavioral health system
• Chemical Dependency; One of the “Original six”
• Dramatic need for culturally competent care

Community Visioning Process
Reform or Rebuild

A fragmented non system of sick care where inequity is common, prevention and wellness are after thoughts and outcomes correlate to societal status

U.S. Non-System (cont)

• Poor ratings in other social indicators
  – Homicide rates
  – Number of prisoners as proportion of population
  – Mental illness
  – Voter turnout
  – Public social expenditure
House bill has multiple provisions to address “Health and Health Care Disparities”

Strategies Something for Everyone

- Framing
- Social Determinants Focus (Unnatural Causes)
- Health Impact Assessment
- Community capacity building for policy development and civic engagement
- Community visioning processes
- Assessing the built environment

Strategies (Cont)

- Food Security Task Force
  - Healthy in a Hurry Corner Store etc
- Youth Empowerment
  - Photo Voice
- Energizing the Faith Community around social justice and human rights
- Undoing Racism training
- Building a Social Movement
HIA-based on a broad model of health which proposes that economic, political, social, psychological and environmental factors determine population health as well as differential effects on sub populations including existing health inequities.

Place Matters
The Built Environment

The role of residential segregation; “The metropolitan areas with the highest segregation levels have the most unequal geographies of opportunity”
Delores Acevedo-Garcia et al
Opportunity Neighborhoods

- Sustainable employment
- High performing schools
- Access to high quality healthcare
- Adequate transportation
- High quality childcare
- Neighborhood safety
- Institutions that facilitate civic engagement
