

## Chief Resident Perspectives

“I am so grateful for my training at USF. I was exposed to some of the highest risk obstetrical, gynecological, and oncological patients in the region from placenta accretas to peripartum cardiomyopathy to advanced cervical cancer requiring exenteration. I felt extremely prepared to go into any subspecialty and am forever indebted to USF, especially the patients, my co-residents, the attendings, and the nurses for all their time and dedication to my residency education!”

- Dr. Soha Patel, '15

“USF gave me the opportunity to move forward into a Maternal Fetal Medicine Fellowship as a well-trained Clinician and Educator. The residency environment was one of clinical inquiry and mentorship that facilitated this transition. I was fortunate to care for patients with complex Obstetrical, Gynecological and surgical histories. These experiences only intensified my dream of caring for the most complex obstetrical patient population while also learning to mentor others in our field.

- Dr. Nina Paidas Teefey '15

“I know that when I graduate from USF I will be well prepared to offer minimally invasive surgery for my patients. I have received excellent training in performing open, laparoscopic, and vaginal hysterectomies. I know that if I choose to perform robotic surgery in the future I will have an advantage over residents at other programs.”

- Dr. Angela Gonzalez '14
