### Meetings

**Tuesday 05/01/12 12:00 noon**
**Grand Rounds**
**“Assessment and Treatment of Headaches”**
Maria-Carmen B. Wilson, M.D.
Clinical Professor of Neurology
Director, Headache Medicine Fellowship
Director, TGH Headache and Pain Center

**Thursday 05/03/12 8:00 a.m.**
**Call Center Meeting**

**Resident Lectures:**

8:00 a.m. **PGY-3 – “Psychodynamic Theories – Object Relations”**
Dr. Robert Fernandez

CHILD – “Yoga and Meditation in Psychiatry”
Dr. Maulik Trivedi

9:00 a.m. **PGY-3 – “Clinical Case Conference”**
Dr. Kailie Shaw and Beth Reese, LCSW

CHILD – “Play Therapy” Dr. Daniel Fallon

10:00 a.m. **PGY-3 & PGY-4 “Board Review Series – PTSD Assessment”** Dr. Croswell

CHILD – “Play Therapy” Dr. Daniel Fallon

11:00 a.m. **Residents Meeting**

1:00 p.m. **PGY-1 – “Interviewing Skills”** Dr. Robert Fernandez

GERI – “Aging and HIV/AIDS” Dr. Francisco Fernandez

2:00 p.m. **PGY-2 – “Introduction to Child – Wrap-up”**
Dr. Saundra Stock

3:00 p.m. **PGY-1 – “Emergency Psychiatry”** Dr. Woodburne Levy

4:00 p.m. **PGY-1 – “Emergency Psychiatry”** Dr. Woodburne Levy
Third Year Medical Student Lectures:
1:00 p.m. “Headache” Dr. Nina Tsakadze
2:00 p.m. “Neuro-Ophthalmology” Dr. Nina Tsakadze
3:00 p.m. “Personality Disorders” Dr. Jennifer White

In The Know!

Research Happenings!

For information regarding current clinical trials, please go to the following website: [http://health.usf.edu/medicine/psychiatry/index.htm](http://health.usf.edu/medicine/psychiatry/index.htm)

Current Open Studies – Call 813-974-2832 or 813-974-1404 for more information on any study or to refer a patient.

**Bipolar I in Teens**
This study is a 3-week investigational medication trial that will test the effectiveness and safety of asenapine compared to placebo in teens ages 12-17 with Bipolar I disorder experiencing a manic or mixed episode. A 26-week extension study is available. Study medication, study visits, and required laboratory work provided at no cost. Volunteers must be between the ages of 12-17 years old and in generally good health with a diagnosis of Bipolar I disorder and currently experiencing manic or mixed symptoms. Principal Investigator – Mike Bengtson, MD.

**Now Enrolling – Bipolar**
A 9-month outpatient study of Ramelteon sub-lingual as an adjunctive treatment to prevent relapse of manic/mixed/depressive symptoms in patients 18-75 years who have experienced a manic/mixed/depressed episode within the last 9 months. Patients will continue on current mood stabilizers, antidepressants, or antipsychotic medications throughout the trial. PI – Carlos Santana, MD

**Now Enrolling – Bipolar I Disorder with Depressive Symptoms**
An 8-week outpatient study assessing Ramelteon sub-lingual as an adjunctive treatment for patients 18-75 years who are currently experiencing depressive symptoms associated with Bipolar I Disorder. Patients must be on Lithium and/or Depakote. PI – Carlos Santana, MD

**Now Enrolling – Schizophrenia Long-Acting IM Depot Open-label Study**
An open-label naturalistic study of Aripiprazole IM (long-acting depot) in patients with schizophrenia 18-65 years. Patients must have been prescribed antipsychotic medication for at least 7 months prior to enrollment and have had at least 1 Inpatient Hospitalization in the past 24 months. PI – Carlos Santana, MD

Quality of Life in Youth with Tic Disorders
A one-time study visit evaluating the quality of life in youth with tic disorders, specifically on various aspects of family functioning and the daily challenges faced by children and their families. Children ages 6-17 years old with a diagnosis of a tic disorder (i.e. Chronic tic disorder or Tourette Syndrome) and are experiencing current tics are eligible to participate. This study is a one-time visit that will include questionnaires and assessments. Participants will also have the opportunity to attend a focus group with youth of similar age assessing kinds of help they received and accessibility of services and the difficulties faced by having tics. Please call (727) 767-8230 for more information. Principal Investigator: Tanya Murphy, MD

Child and Adolescent Tourette's Disorder Guanfacine Clinical Trial
The purpose of this research study is to learn more about the new extended release formula of the drug, guanfacine. This new formula is called Intuniv. This study will help us understand how safe and how well this new extended release formula of guanfacine works for children with chronic tics. Your child is being asked to take part in this research study because he/she has been diagnosed with Chronic Motor or Vocal Tic Disorder or Tourette's Disorder. Main symptoms are motor tics such as uncontrolled movements and/or vocal tics such as repeated noises. These tics occur many times a day, nearly every day lasting for at least 1 year. Children ages 6-17 years old are eligible to participate. Please call (727) 767-8230 for more information. Principal Investigator: Tanya Murphy, MD

Living with Tics: The Living with Tics research study hopes to show how well a type of psychotherapy helps children better cope with tics and become more resilient. Children who are interested to participate must attend an initial assessment to determine eligibility. Eligible participants must be between 8 and 18 years of age, have a diagnosis of Tourette Syndrome or Chronic Tic Disorder, experience tic-related impairment, and either be medication-free or on stable medication. If eligible, interested participants will be randomly assigned to receive immediate psychotherapy or a 10 week waitlist control condition followed by subsequent psychotherapy. As part of the study, there is no charge for the psychotherapy treatment. The immediate psychotherapy condition consists of weekly therapy sessions over a 10 week period. This multi-component treatment approach includes habit reversal training, anger management, problem solving skills and other related therapeutic components to help improve the quality of life for children with chronic tic disorders. Please call (727) 767-8230 for more information. Principal Investigator: Eric Storch PhD.

Adult OCD Ondansetron Clinical Trial
The purpose of this research study is to investigate the effectiveness, safety, and tolerability of 2 dosages Ondansetron as compared to placebo (a substance which looks like an active drug but has no active ingredient) in adult who have OCD and who are currently taking a selective serotonin reuptake inhibitor (SRI) such as Anafranil® (clomipramine) Paxil® (paroxetine), Prozac® (fluoxetine), Luvox® (fluvoxamine, or Zoloft® (sertraline). Another purpose of this study is to find out how the study drug works in the body when taken along with an SSRI. Please call (727) 767-8230 for more information. Principal Investigator: Tanya Murphy, MD.
Pediatric OCD D-Cycloserine and Cognitive Behavioral Therapy (CBT) Research Study
The purpose of this research study is to examine if d-cycloserine enhances cognitive behavioral therapy for pediatric OCD. Participants will be involved in fifteen clinical visits spanning a nine-month period. Each participant will receive ten sessions of cognitive behavioral therapy and seven doses of the study medication or placebo one hour prior to session. Children ages 7-17 years old are eligible to participate. Please call (727) 767-8230 for more information.
Principal Investigator: Eric Storch PhD

Cognitive-Behavioral Therapy (CBT) for Anxiety Disorders in Children with Autism Spectrum Disorder Research Study
The purpose of this research study is to examine the efficacy of a manualized cognitive-behavioral therapy to treat anxiety disorders in children with autism spectrum disorders. Therapy sessions last approximately one hour a week for sixteen weeks. In addition, participants will be involved in a number of anxiety and developmental assessments free of charge. Children ages 7-16 years old are eligible to participate. Please call (727) 767-8230 for more information. Principal Investigator: Eric Storch PhD
