Outline of Topics

CPR changes affecting scholarly activity tracking

- Domains
- Reporting
- Dissemination

How your library can help

- ORCID ID
- My Bibliography
- SciENcv
- EndNote
- Research & instruction support
Domains of Faculty Scholarly Activity

 Programs must demonstrate accomplishments in at least three of the following domains:

• Research in basic science, education, translational science, patient care, or population health
• Peer-reviewed grants
• Quality improvement and/or patient safety initiatives
• Systematic reviews, meta-analyses, review articles, chapters in medical textbooks, or case reports
• Creation of curricula, evaluation tools, didactic educational activities, or electronic educational materials
• Innovations in education
• Contribution to professional committees, educational organizations, or editorial boards

Reporting of Faculty Scholarly Activity

→ Residency programs will **no longer** report scholarly activity by individual faculty members.

→ Subspecialty programs will continue to report scholarly activity by individual faculty members.

Dissemination of Faculty Scholarly Activity

IV.D.2.b).(1) • Faculty participation in grand rounds, posters, workshops, quality improvement presentations, podium presentations,
  • Grant leadership,
  • Non-peer-reviewed print/electronic resources, articles or publications, book chapters, textbooks,
  • Webinars, service on professional committees,
  • Serving as a journal reviewer, journal editorial board member, or editor;

IV.D.2.b).(2) • Peer-reviewed publication

*most specialties require both types (know your program!)

Biggest Change for Residents?

SHOULD is now MUST

IV.D.3.a) Residents must participate in scholarship.
Coming Soon!

• Survey for Tracking Scholarly Activity
  • Designed with WebADS changes in mind
  • Simple input for faculty, residents, and fellows
  • Easy to translate results into WebADS

• Motivation
DISTINGUISH YOURSELF IN THREE EASY STEPS

ORCID provides a persistent digital identifier that distinguishes you from every other researcher and, through integration in key research workflows such as manuscript and grant submission, supports automated linkages between you and your professional activities ensuring that your work is recognized. Find out more.

1. REGISTER
Get your unique ORCID identifier Register now!
Registration takes 30 seconds.

2. ADD YOUR INFO
Enhance your ORCID record with your professional information and link to your other identifiers (such as Scopus or ResearcherID or LinkedIn).

3. USE YOUR ORCID ID
Include your ORCID identifier on your Webpage, when you submit publications, apply for grants, and in any research workflow to ensure you get credit for your work.

Example:
https://orcid.org/0000-0002-2081-4672
My Bibliography (from MyNCBI)

- Free!
- Integrated with PubMed and other NCBI resources
- Automatically load PubMed citations
- Manually enter citations not found in PubMed
- Keep private or share publicly
- Required for NIH Funding Compliance
- Automatically updates your SciENcv

Example:
All Together Now!

ORCID ID → My Bibliography → SciENcv
Library Services

https://health.usf.edu/library

**Available to all USF faculty, residents, fellows, students, AND staff**

- Research support
- Instruction

A. Personal Statement

I have the expertise, leadership, training, expertise and motivation necessary to successfully carry out the proposed research project. I have a broad background in psychology, with specific training and expertise in ethnographic and survey research and secondary data analysis on psychological aspects of drug addiction. My research includes neuropsychological changes associated with addiction. As PI or co-Investigator on several university- and NIH-funded grants, I laid the groundwork for the proposed research by developing effective measures of disability, depression, and other psychosocial factors relevant to the aging substance abuser, and by establishing strong ties with community providers that will make it possible to recruit and track participants over time as documented in the following publications. In addition, I successfully administered the projects (e.g. staffing, research protections, budget), collaborated with other researchers, and produced several peer-reviewed publications from each project. As a result of these previous experiences, I am aware of the importance of frequent communication among project members and of constructing a realistic research plan, timeline, and budget. The current application builds logically on my prior work. During 2005-2006 my career was disrupted due to family obligations. However, upon returning to the field I immediately resumed my research projects and collaborations and successfully competed for NIH support.

B. Positions and Honors

Positions and Employment
1998-2000  Fellow, Division of Intramural Research, National Institute of Drug Abuse, Bethesda, MD
2000-2002  Lecturer, Department of Psychology, Middlebury College, Middlebury, VT
2001-  Consultant, Coastal Psychological Services, San Francisco, CA
2002-2005  Assistant Professor, Department of Psychology, Washington University, St. Louis, MO
2007-  Associate Professor, Department of Psychology, Washington University, St. Louis, MO

Other Experience and Professional Memberships
1995-  Member, American Psychological Association
1998-  Member, Gerontological Society of America
1998-  Member, American Geriatrics Society
2000-  Associate Editor, Psychology and Aging
2003-  Board of Advisors, Senior Services of Eastern Missouri
2003-05  NIH Peer Review Committee: Psychobiology of Aging, ad hoc reviewer
2007-11  NIH Risk, Adult Addictions Study Section, members

Honors
2003   Outstanding Young Faculty Award, Washington University, St. Louis, MO
2004   Excellence in Teaching, Washington University, St. Louis, MO
2009   Award for Best in Interdisciplinary Ethnography, International Ethnographic Society

C. Contribution to Science
1. My early publications directly addressed the fact that substance abuse is often overlooked in older adults. However, because many older adults were raised during an era of increased drug and alcohol use, there are reasons to believe that this will become an increasing issue as the population ages. These publications found that older adults appear in a variety of primary care settings or seek mental health providers to deal with emerging addiction problems. These publications document this emerging problem but guide primary care providers and geriatric mental health providers to recognize symptoms, assess the nature of the problem and apply the necessary interventions. By providing evidence and simple clinical approaches, this body of work has changed the standards of care for addicted older adults and will continue to provide assistance in relevant medical settings well into the future. I served as the primary investigator or co-investigator in all of these studies.

2. In addition to the contributions described above, with a team of collaborators, I directly documented the effectiveness of various intervention models for older substance abusers and demonstrated the importance of social support networks. These studies emphasized contextual factors in the etiology and maintenance of addictive disorders and the disruptive potential of networks in substance abuse treatment. This body of work also discusses the prevalence of alcohol, amphetamine, and opioid abuse in older adults and how networking approaches can be used to mitigate the effects of these disorders.
3. Methadone maintenance has been used to treat narcotics addicts for many years but I led research that has shown that over the long-term, those in methadone treatment view themselves negatively and they gradually begin to view treatment as an intrusion into normal life. Elderly narcotics users were shown in carefully constructed ethnographic studies to be especially responsive to tailored social support networks that allow them to eventually reduce their maintenance doses and move into other forms of therapy. These studies also demonstrate the policy and commercial implications associated with these findings.

D. Additional Information: Research Support and/or Scholastic Performance

Ongoing Research Support
R01 DA942367 Hunt (PI) 09/01/08-08/31/16
Health trajectories and behavioral interventions among older substance abusers
The goal of this study is to compare the effects of two substance abuse interventions on health outcomes in an urban population of older opiate addicts.
Role: PI

R01 MH922731 Merryle (PI) 12/15/07-11/30/15
Physical disability, depression and substance abuse in the elderly
The goal of this study is to identify disability and depression trajectories and demographic factors associated with substance abuse in an independently-living elderly population.
Role: Co-Investigator

Faculty Resources Grant, Washington University 08/15/09-08/14/15
Opiate Addiction Database
The goal of this project is to create an integrated database of demographic, social and biomedical information for homeless opiate abusers in two urban Missouri locations, using a number of state and local data sources.
Role: PI

Completed Research Support
R21 AA998075 Hunt (PI) 01/01/11-12/31/13
Community-based intervention for alcohol abuse
The goal of this project was to assess a community-based strategy for reducing alcohol abuse among older individuals.
Role: PI
NAME: Robertson-Chang, Leilani

eRA COMMONS USER NAME (credential, e.g., agency login): RobertsonL

POSITION TITLE: Postdoctoral Researcher

A. Personal Statement

My long term research interests involve the development of a comprehensive understanding of key developmental pathways and how alterations in gene expression contribute to human disease. My academic training and research experience have provided me with an excellent background in multiple biological disciplines including molecular biology, microbiology, biochemistry, and genetics. As an undergraduate, I was able to conduct research with Dr. Xavier Factor on the mechanisms of action of a new class of antibiotics. As a predoctoral student with Dr. Tanti Auguri, my research focused on the regulation of transcription in yeast, and I gained expertise in the isolation and biochemical characterization of transcription complexes. I developed a novel protocol for the purification of components of large transcription complexes. I was first author of the initial description of the Most Novel Complex. A subsequent first author publication challenged a key paradigm of transcription elongation and was a featured article in a major journal. During my undergraduate and graduate careers, I received several academic and teaching awards. For my postdoctoral training, I will continue to build on my previous training in transcriptional controls by moving into a mammalian system that will allow me to address additional questions regarding the regulation of differentiation and development. My sponsor Dr. I.M. Creative is an internationally recognized leader in the transcription/chromatin field and has an extensive record for training postdoctoral fellows. The proposed research will provide me with new conceptual and technical training in developmental biology and whole genome analysis. In addition, the proposed training plan outlines a set of career development activities and workshops – e.g. grant writing, public speaking, lab management, and mentoring students – designed to enhance my ability to be an independent investigator. My choice of sponsor, research project, and training will give me a solid foundation to reach my goal of studying developmental diseases in man. During my second postdoctoral
year in Dr. Creative’s lab my father had a severe stroke that eventually ended his life. I was out of the lab for six months dealing with my father's incapacitating illness and end-of-life issues. This hiatus in training reduced my scientific productivity.

1. Robertson-Chang L, Schneider K, Chen M, Auguri T. Rapid isolation and characterization of the most novel transcription complex in Saccharomyces cerevisiae and its role in transcription elongation. CSHL Meeting on Mechanisms of Eukaryotic Transcription; 2009 August; Cold Spring Harbor, NY.

B. Positions and Honors

Positions and Employment
1999 - 2001 Engineer, The IBeam Group
2007 - 2007 Postdoctoral Researcher, UC San Diego
2008 - Postdoctoral Researcher, Michigan State University

Other Experience and Professional Memberships
1997 - Member, Sigma Xi
2000 - Member, Association for Women in Science
2002 - Member, National Society for Bioinformatics and Biotechnology

Honors
1995 - 1997 Scholarship, Daughters of Hawaii Society
1995 - 1999 Scholarship, National Merit Scholarship Program
1999 Paula F. Laufenberg award for best senior project in the Department of Engineering, Swarthmore College
1999 B.S. awarded with high honors, Swarthmore College
2001 STAR award for public service in engineering, The IBeam Group
2002 - 2005 Predoctoral Fellowship for Minorities, Ford Foundation

C. Contribution to Science

1. Early Career: My early career contributions were focused on applying my knowledge of structural engineering to improving the design and integrity of tensile structures. More specifically, I worked with a team of engineers at the IBeam Group to develop concrete with a higher tensile strength that could be utilized in large structures such as suspension bridges. My particular role in the project was to identify candidate polymers, determine the ultimate tensile strength of these polymers, and make recommendations as to which polymer would afford concrete the most structural integrity under various stresses.

2. **Graduate Career:** My graduate research contributions focused on transcriptional gene regulation in Saccharomyces cerevisiae. Results from my research were highly relevant as they provided new details into the workings of complex biological systems, and allowed for further extrapolations into the development of certain diseases and their progression. I originally developed a novel protocol for the purification for components of large protein complexes. A subsequent publication, in which I isolated and characterized a long sought after transcription complex, challenged a key paradigm of transcription elongation and was a featured article in a major journal.
   a. Robertson-Chang L, Schneider K, Chen M, Auguri T. Rapid isolation and characterization of the most novel transcription complex in Saccharomyces cerevisiae and its role in transcription elongation. CSHL Meeting on Mechanisms of Eukaryotic Transcription; 2009 August; Cold Spring Harbor, NY.
   c. Robertson-Chang L, Auguri T. A tandem affinity purification tag approach allows for isolation of interacting proteins in Saccharomyces cerevisiae. Yeast Genetics and Molecular Biology Meeting; 2004 September; Seattle, WA.

3. **Postdoctoral Career:** As a postdoctoral fellow, my research has provided a compelling link between mutations arising in stress response proteins and the development of various autoimmune diseases in humans. Previous studies have shown dysregulation in the innate immune response lead to autoimmune diseases in humans. A few Rtc homologues have now been identified in humans and appear to play a role in the regulation of genes in the innate immune response. My research is focused on the transcriptional regulator Rtc from Drosophila melanogastor.
