At A Glance Continued

- The USF Cognitive Medicine Program encompasses the clinical, research and training activities related to neuropsychiatric disorders, traumatic brain injury and device-based treatments for psychiatric disorders.
- The Higgins Alcohol and Addictions Research Program provides rapid access to information and support combined with outreach and care management for individuals and families suffering from substance-related problems.
- The USF Memory Disorders Clinic offers a multidisciplinary and individualized approach to the diagnosis of persons with memory disorders and related difficulties.
- The USF Neuropsychology Program provides psychological and neuropsychological assessment for the diagnosis and treatment of disorders that affect intellectual, cognitive, academic, personality and emotional state.
- USF Psychiatry Clinic provides clinical care, teaching, and research focusing on mental disorders and treatment techniques.
- The USF Psychiatry and the Law Program provides high quality, comprehensive and coordinated forensic psychiatry services.
- The USF Neurotherapies Clinic provides new techniques in the treatment of certain mental health disorders. Neurotherapy utilizes magnetic field or electrical charge to stimulate areas of the brain to assist with symptom improvement.
