Pumping and Milk Storage

If you are unable to breastfeed your baby directly, it is important to remove milk during the times your baby normally would feed. This will help you continue to make milk. Before you express breast milk, be sure to wash your hands. Also, make sure the area where you are expressing is clean.

If you need help to get your milk to start flowing, have one of the following items nearby—a picture of your baby, a baby blanket, or an item of your baby’s clothing that has his or her scent on it. You can also apply a warm moist compress to the breast, gently massage the breasts, or sit quietly and think of a relaxing setting.

| Hand Expression            | You use your hand to massage and compress your breast to remove milk. | • Requires practice, skill, and coordination.  
• Gets easier with practice; can be as fast as pumping.  
• Good if you are seldom away from baby or need an option that is always with you. But all moms should learn how to hand express. | Free, unless you need help from a breastfeeding professional who charges for her services. |
| Manual Pump                | You use your hand and wrist to operate a hand-held device to pump the milk. | • Requires practice, skill, and coordination.  
• Useful for occasional pumping if you are away from baby once in a while. | $30 to $50 |
| Automatic, Electric Breast Pump | Runs on battery or plugs into an electrical outlet. | • Can be easier for some moms.  
• Can pump one breast at a time or both breasts at the same time.  
• Double pumping may collect more milk in less time, so it is helpful if you are going back to work or school full time.  
• Need places to clean and store the equipment between uses. | $150 to over $250 |

Hospital-grade electric pumps can be rented from a lactation consultant at a local hospital or from a breastfeeding organization. These pumps work well for establishing milk supply when new babies can’t feed at the breast. Mothers who have struggled with other expression methods may find that these pumps work well for them.
**Storage of Breast Milk**

Breast milk can be stored in clean glass or hard BPA-free plastic bottles with tight-fitting lids. You can also use milk storage bags, which are made for freezing human milk. Do not use disposable bottle liners or other plastic bags to store breast milk.

After each pumping

- Label the date on the storage container. Include your child’s name if you are giving the milk to a childcare provider.

- Gently swirl the container to mix the cream part of the breast milk that may rise to the top back into the rest of the milk. Shaking the milk is not recommended – this can cause a breakdown of some of the milk’s valuable components.

- Refrigerate or chill milk right after it is expressed. You can put it in the refrigerator, place it in a cooler or insulated cooler pack, or freeze it in small (2 to 4 ounce) batches for later feedings.

**Tips for freezing milk**

- Wait to tighten bottle caps or lids until the milk is completely frozen.

- Try to leave an inch or so from the milk to the top of the container because it will expand when freezing.

- Store milk in the back of the freezer – not in the freezer door.

**Tips for thawing and warming up milk**

- Clearly label milk containers with the date it was expressed. Use the oldest stored milk first.

- Breast milk does not necessarily need to be warmed. Some moms prefer to take the chill off and serve at room temperature. Some moms serve it cold.

- Thaw frozen milk in the refrigerator overnight, by holding the bottle or frozen bag of milk under warm running water, or setting it in a container of warm water.

- Never put a bottle or bag of breast milk in the microwave. Microwaving creates hot spots that could burn your baby and damage the components of the milk.

- Swirl the milk and test the temperature by dropping some on your wrist. It should be comfortably warm.

- Use thawed breast milk within 24 hours. Do not re-freeze thawed breast milk.
Guide to Storing Fresh Breast Milk for Use with Healthy Full-Term Infants

<tbody>
<tr>
<td>Countertop, table</td>
<td>Room temp (60°F- 85°F)</td>
<td>Up to 3-4 hours is best. Up to 6-8 hours is okay for very clean expressed milk.</td>
<td>Containers should be covered and kept as cool as possible; covering the container with a clean cool towel may keep milk cooler. Throw out any leftover milk within 1 to 2 hours after the baby is finished feeding.</td>
</tr>
<tr>
<td>Small cooler with a blue-ice pack.</td>
<td>59°F</td>
<td>24 hours.</td>
<td>Keep ice packs in contact with milk containers at all times; limit opening cooler bag.</td>
</tr>
<tr>
<td>Refrigerator</td>
<td>39°F or colder</td>
<td>Up to 72 hours is best. Up to 5-8 days is okay for very clean expressed milk.</td>
<td>Store milk in the back of the main body of the refrigerator.</td>
</tr>
<tr>
<td>Freezer</td>
<td>24°F or colder</td>
<td>Up to 6 months is best. Up to 12 months is okay if milk is stored at 0°F or colder.</td>
<td>Store milk toward the back of the freezer where temperature is most constant. Milk stored at 0°F or colder is safe for longer durations, but the quality of the milk might not be as high.</td>
</tr>
</tbody>

It was really never an option for me not to breastfeed. Yet, when I started on that journey I had no idea what it would have in store for us. Having a supportive husband was as much a confidence booster as it was a help. It is a commitment I never fully understood until my daughter latched on for the very first time and I knew I was her sole source of sustenance for at least the next 6 months. It is very interesting trying to navigate through a society that is not really breastfeeding friendly. I was never shy about where I nursed, so I got looks and people turned away as if I were doing something taboo.

But that fueled me in my quest to not only continue to nurse until my daughter was at least one year old, but to also be vocal to any soon-to-be mother I knew about the benefits of breastfeeding beyond the obvious nutritional and financial benefits. I wanted to tell them about the emotional benefits that you and your child receive from that time together – how there is no substitute for the way your child is comforted when he/she is being breastfed, and how you are also comforted and soothed.

Breastfeeding has made me feel like I have given my children the best start that I possibly could give them. While there are definitely challenges to breastfeeding, the benefits far surpass them for you and especially for your baby.
