FPQC Maternal Opioid Recovery Effort (MORE) Data Collection <u>Definitions</u>

Collect data on all women admitted to the hospital for delivery with <u>any</u>opioid use during this pregnancy regardless of infant outcome

DEMOGRAPHIC

GA: Infant's birth gestational age. Collect in weeks and days.

Date of delivery: Collect in MM/DD/YY format.

Maternal age: the age of the mother at the time of delivery. Completed years only. Do not round up.

Type of insurance: Mother's insurance type as documented in the medical record.

Race & Ethnicity: Mother's race and ethnicity as documented in the medical record.

Prenatal Care: specify the trimester when prenatal care started as documented in the medical record.

Mother intends to keep her newborn(s): whether the mother intends to keep her newborn(s) at the time of mother's discharge

Route of delivery: final route of delivery as documented in the medical record.

SCREENING

Opioid use 1st identified: the period when opioid use was first identified by someone in the healthcare system.

Opioid use identified by: tool/test/circumstance that identified opioid use. Check all that apply.

Infectious disease screening: woman was screened for HIV, Hepatitis A, Hepatitis B, Hepatitis C, Gonorrhea, Chlamydia, Syphilis and Tuberculosis either prenatally or during this admission for delivery as documented in the medical record

Mental Health screening: woman was screened for psychiatric comorbidities including peripartum depression.

Intimate partner violence screening: woman was screened for physical, sexual, or psychological harm by a current or former partner or spouse.

DRUG USE

Select any that apply for the listed drugs (illicit or prescribed) based on maternal report or drug screen (mother, infant).

TREATMENT

Prescribed opioid : the opioid was prescribed by a medical professional.

Detox during pregnancy: woman who received opioid detoxification as the primary intervention during this pregnancy.

MAT started: specify the period when MAT was started as documented in the medical record (treatment has to be started not referred).

Mental/Behavioral Health: specify the period when mental/behavioral health was started as documented in the medical record (treatment has to be started not referred). Mental/behavioral health services to be defined by hospital.

Breastfeeding or pumping at maternal discharge: mother is breastfeeding infant or pumping at maternal discharge.

Rooming-in: the Infant roomed in with the mother prior to maternal discharge. Mark unable if infant was transferred to another facility or to the NICU

ON DISCHARGE - Discharge Bundle

Education: education provided to the patient on: MAT & substance use disorder (SUD) treatment, infectious/mental health comorbidities, narcan® (naloxone) use, family planning, NAS including non-pharmacological management and safe sleep.

Services completed prior to maternal discharge: Post partum depression (PPD) screening, social work consult, peer counselor visit, pediatric consult and contraceptive plan documented in the medical record. As part of a contraceptive plan a method must be provided, if method not available, an appointment must be schedule to provide the method in the contraceptive plan.

Opioid prescribed at discharge: Whether or not an opioid was prescribed at discharge for pain management.

Referrals provided prior to maternal discharge: OB postpartum visit, behavioral health/MAT and Healthy start services/home visiting programs
