2019 Low-Risk Nulliparous Term Singleton Vertex - NTSV Cesarean Rate, FL birthing hospitals

Project Goal

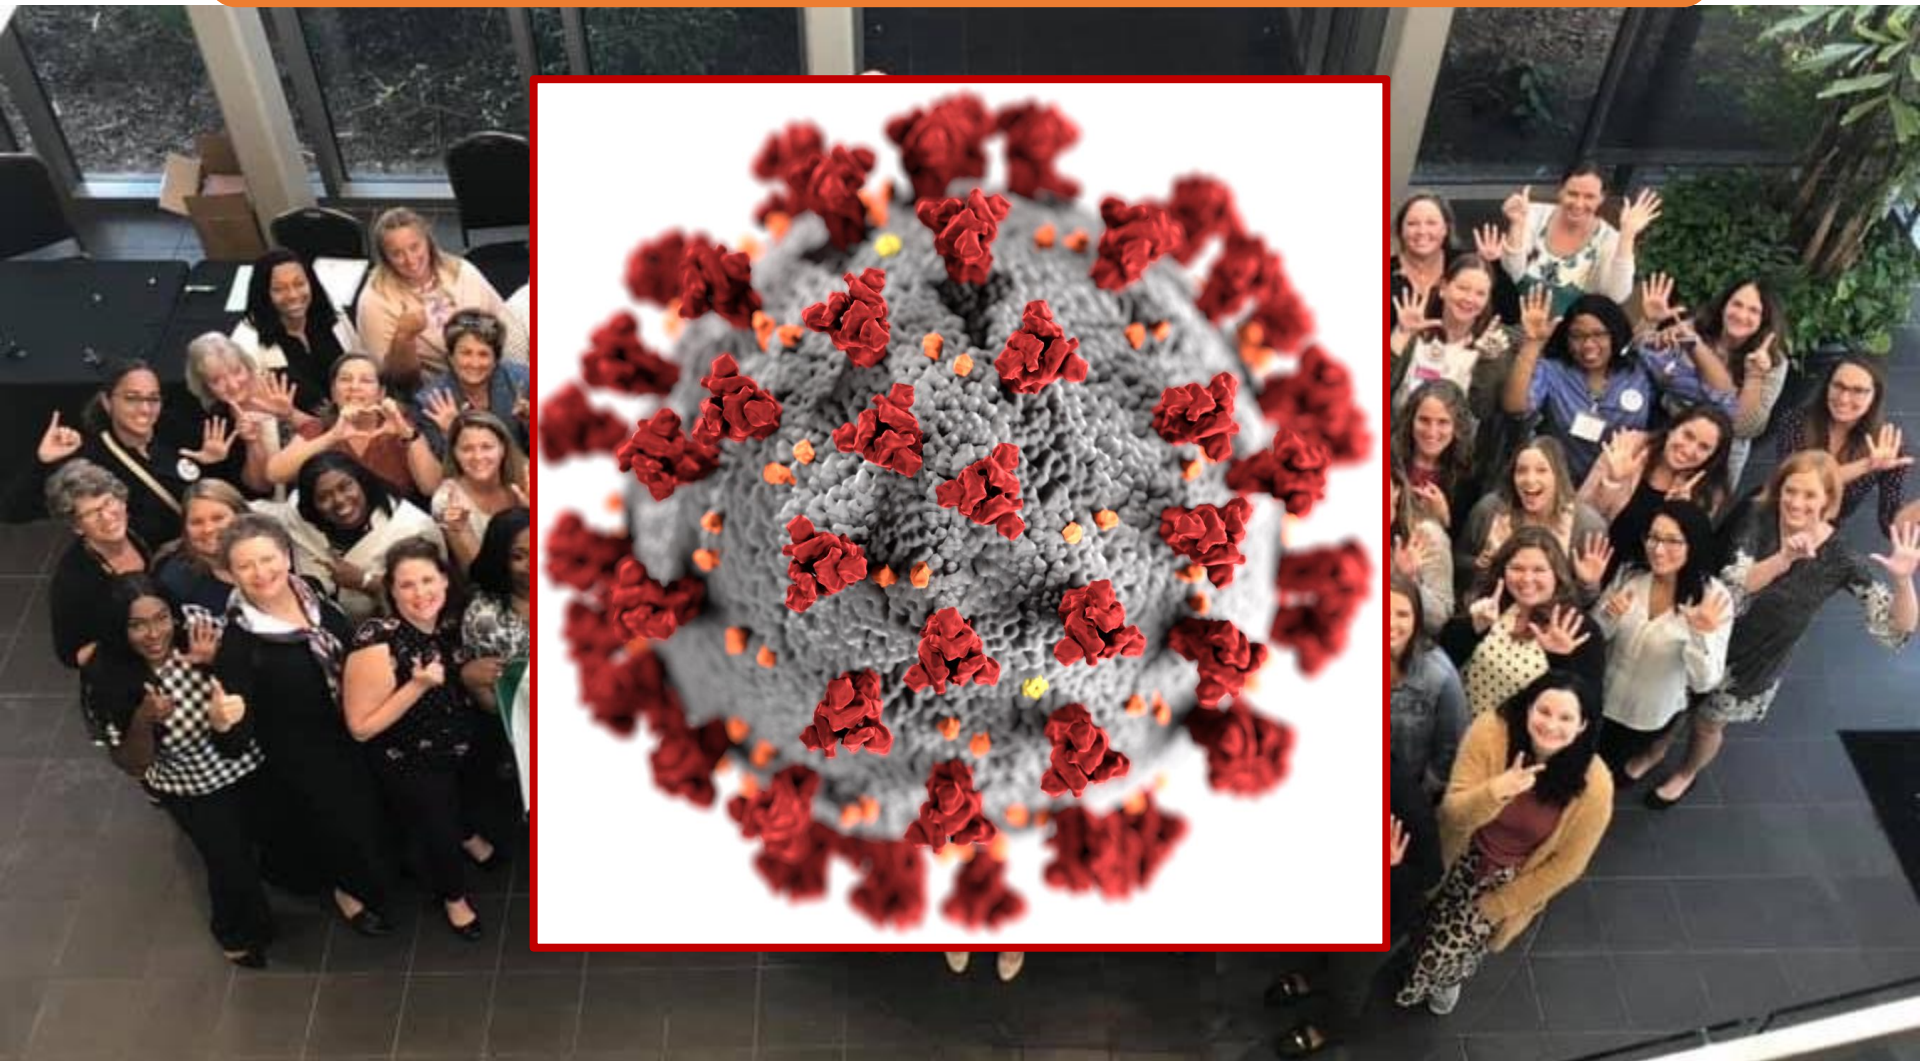

The goal of the PROVIDE Initiative is to improve maternal and newborn outcomes by applying evidence-based interventions to promote primary vaginal deliveries at Florida delivery hospitals and ultimately reduce NTSV cesareans.

NTSV = Nulliparous Term Singleton Vertex

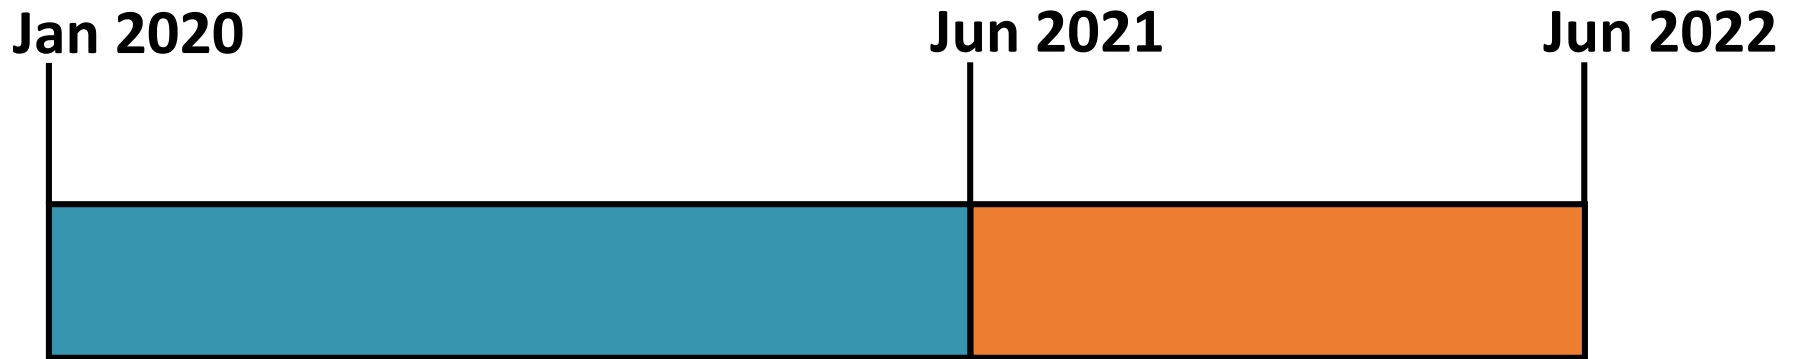

PROVIDE 2.0 Kickoff

PROVIDE 2.0 Kickoff

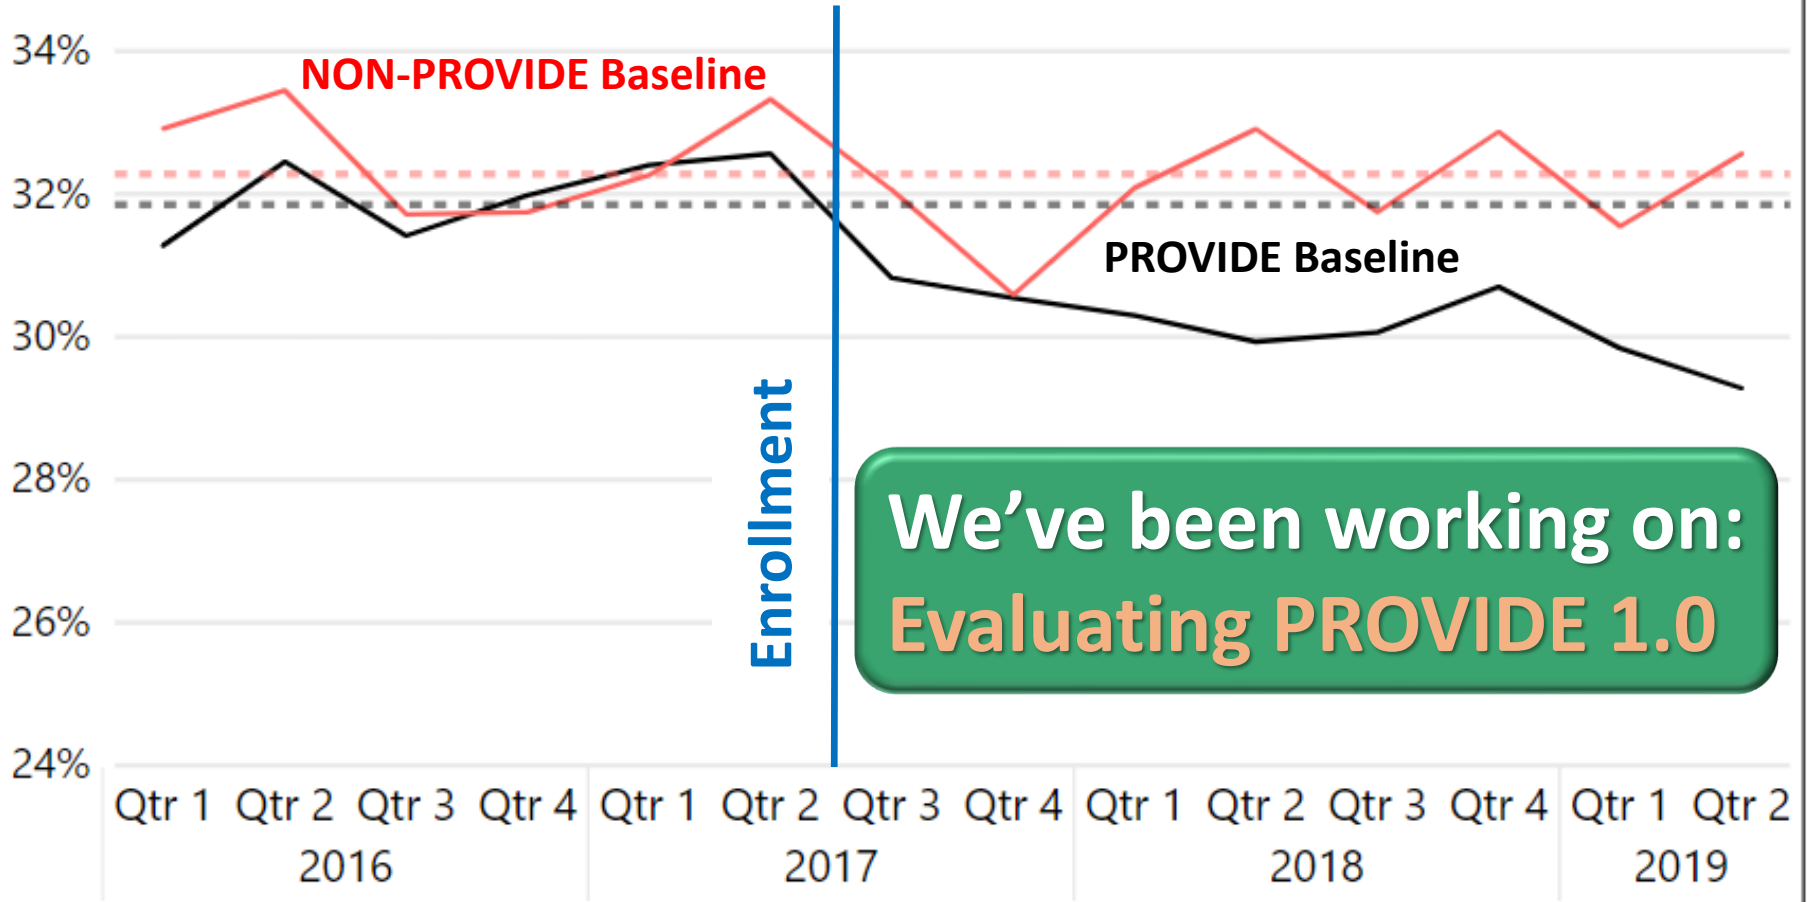

Extended PROVIDE 2.0

Materials

CESAREAN (C-SECTION)

Cesarean is a type of surgery done to deliver your baby through your belly. It should only be done when there is a health problem or emergency with mom or her baby.*

RISKS

- Longer hospital stay and recovery time
- More pain after surgery
- Wound infection after surgery
- Bleeding requiring blood transfusion
- Injury to internal organs
- Higher risk of blood clots
- Accidental surgical cut to baby
- Baby may separate from you for care
- Breathing problems for baby
- Higher risk of problems in future pregnancies

BENEFITS

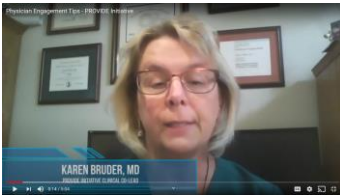

- Delivery day can be planned
- Safer delivery of large baby (10-11 lbs)
- Safer delivery of baby in breech position

* Discuss plans for your labor and delivery with your doctor early in your pregnancy.
