---

**Enrolling Soon – Mild Alzheimer’s Disease**

This double-blind, placebo-controlled study is aimed at identifying less invasive markers based on blood, psychometric testing, and cognitive properties in subjects with mild Alzheimer’s disease versus placebo when added to existing stable donepezil treatment on cognitive and functional outcomes. Please call Kathy at (813) 974-9104 for more information.

**Now Enrolling – ADHD Study for Pediatric Patients**

This is a double-blind, placebo-controlled study testing a Stepped Care Cognitive Behavioral Therapy (CBT) approach. Participants will be ages 6-12 years inclusive with a diagnosis of ADHD and currently receiving standard ADHD treatment. Please call Colleen at (813) 974-3100 for more information.

**Incoming soon – Clinical and Criminal Justice Outcomes in the SAMHSA Jail Diversion and Trauma Recovery (JERT) Program**

This is a new research study to identify less invasive markers based on blood, psychometric testing, and system responses to this problem, and discuss the clinical and criminal justice outcomes of the JERT program. Please contact mtavrell@health.usf.edu or 813-259-7006 for more information.

---

**Enrolling Soon – Mild to Moderate Alzheimer’s Disease**

This research is being done to test the biological markers for different phases of Alzheimer’s disease. Please call 813-259-7006 to make a referral.
